

DENTEEES®

Chews and Stars

- Chews formulated for dogs, Stars formulated for dogs and cats
- Cleansing, breath freshening treat

Indications

- Provides whitening and deodorizing activity
- Sodium Hexametaphosphate reduces plaque build up

Active Ingredients

Acetic acid, sodium hexametaphosphate

“DENTEEES Stars and Chews are palatable, digestible dental treats that contain sodium hexametaphosphate, acetic acid, grapefruit seed extract, and clove. Both sodium hexametaphosphate and acetic acid are sequestering agents, which bind minerals and, as a result, inhibit dental plaque transformation into calculus. Sodium hexametaphosphate coats teeth and decreases plaque and calculus build-up. DENTEEES treats are manufactured with limited antigens (no beef or beef by-products), which makes them appealing to owners of pets with food allergies.”¹

Product No.	Size
DSW	4 oz stars
BSW	5 lb stars
DCW	12 oz chews
BCW	5 lb chews

Method of use covered by U.S. Patent 6,610,276

Dosage and Administration

Weight of Dog	Stars per Feeding
