

COMPOSURE™

» An advanced formula to promote calming effects and help manage everyday stress

A calming support formula recommended for pets exposed to increased environmental stressors.

When pets can't adapt to stress it can lead to anxiousness, nervousness, hyperactivity, frayed nerves, abnormal urine marking, excessive scratching, trembling or shivering and destructive or aggressive behavior.

Recommended for:

- » Changes to environment
- » Boarding or kenneling
- » Veterinary or grooming visits
- » Holidays and parties
- » Boredom or separation anxiety
- » Moving or traveling
- » Fireworks and thunderstorms

Composure™ Feline helps alleviate stress-related behavior problems without affecting the animal's personality or energy level. It can be used daily or when extra help to relax is needed.

It contains a combination of factors not found in other calming formulas, such as a calming complex from colostrum, L-Theanine, and thiamine (vitamin B1), all of which address stress and calming.

About the formula:

- » Colostrum Calming Complex® Biopeptide Blend is isolated from colostrum proteins, which have a calming effect on animals. These bioactive proteins have been found to support cognitive function and stress reduction. The Colostrum Calming

Complex® Biopeptide Blend works synergistically with the L-Theanine in this formula to promote relaxation and cognition in cats.

- » L-Theanine supports calming and relaxation and the reduction of irritability and low mood states. L-Theanine has been extensively researched for its ability to reduce stress, anxiousness, and unwanted behavior. L-Theanine is a naturally occurring amino acid found in green tea that is a derivative of the neurotransmitter glutamic acid. It helps the body produce other calming amino acids, such as dopamine, GABA and tryptophan and it helps bring certain neurotransmitters into balance. Studies on L-Theanine showed reduced stress-related behavior in dogs without adverse effect or drowsiness; dogs were alert, playful, and calmer in stressful situations.
- » Thiamine (vitamin B1) helps manage stress and reduces irritability. Thiamine has been shown to affect the central nervous system to help calm and soothe animals. A lack of thiamine can cause mental confusion, muscular weakness, muscle spasms, nervousness, reduced appetite, or weight loss during periods of stress.

Composure™ Feline does not contain L-tryptophan or herbal ingredients, such as kava kava, Valerian, or St. John's Wort. Its ingredients do not cause addiction, drowsiness, or impaired motor skills.
